The Joy of Search

How to be a great online searcher, demonstrated with step-by-step searches for answers to a series of intriguing questions (for example, "Is that plant poisonous?"). We all know how to look up something online by typing words into a search engine. We do this so often that we have made the most famous search engine a verb: we Google it—"Japan population" or "Nobel Peace Prize" or "poison ivy" or whatever we want to know. But knowing how to Google something doesn't make us search experts; there's much more we can do to access the massive collective knowledge available online. In The Joy of Search, Daniel Russell shows us how to be great online researchers. We don't have to be computer geeks or a scholar searching out obscure facts; we just need to know some basic methods. Russell demonstrates these methods with step-by-step searches for answers to a series of intriguing questions—from "what is the wrong side of a towel?" to "what is the most likely way you will die?" Along the way, readers will discover essential tools for effective online searches—and learn some fascinating facts and interesting stories. Russell explains how to frame search queries so they will yield information and describes the best ways to use such resources as Google Earth, Google Scholar, Wikipedia, and Wikimedia. He shows when to put search terms in double quotes, how to use the operator (*), why metadata is important, and how to triangulate information from multiple sources. By the end of this engaging journey of discovering, readers will have the definitive answer to why the best online searches involve more than typing a few words into Google.

Relevant Search

Summary Relevant Search demystifies relevance work. Using Elasticsearch, it teaches you how to return engaging search results to your users, helping you understand and leverage the internals of Lucene-based search engines. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology Users are accustomed to and expect instant, relevant search results. To achieve this, you must master the search engine. Yet for many developers, relevance ranking is mysterious or confusing. About the Book Relevant Search demystifies the subject and shows you that a search engine is a programmable relevance framework. You'll learn how to apply Elasticsearch or Solr to your business's unique ranking problems. The book demonstrates how to program relevance and how to incorporate secondary data sources, taxonomies, text analytics, and personalization. In practice, a relevance framework requires softer skills as well, such as collaborating with stakeholders to discover the right relevance requirements for your business. By the end, you'll be able to achieve a virtuous cycle of provable, measurable relevance improvements over a search product's lifetime. What's Inside Techniques for debugging relevance? Applying search engine features to real problems? Using the user interface to guide searchers? A systematic approach to relevance? A business culture focused on improving search About the Reader For developers trying to build smarter search with Elasticsearch or Solr. About the Authors Doug Turnbull is lead relevance consultant at OpenSource Connections, where he frequently speaks and blogs. Google Semantic Search

Any organization that has a searchable web site or intranet is sitting on top of hugely valuable and usually under-exploited data: logs that capture what users are searching for, how often each query was searched, and how many results each query retrieved. Search queries are gold: they are real data that show us exactly what users are searching for in their own words. This book shows you how to use search analytics to carry on a conversation with your customers: listen to and understand their needs, and improve your content, navigation and search performance to meet those needs.

Search Analytics for Your Site

Behind Google's deceptively simple interface is immense power for both market and competitive research—if you know how to use it well. Sure, basic searches are easy, but complex searches require specialized skills. This concise book takes you through the full range of Google's powerful search-refinement features, so you can quickly find the specific information you need. Learn techniques ranging from simple Boolean logic to URL parameters and other advanced tools, and see how they're applied to real-world market research examples. Incorporate advanced search operators such as filetype:, intitle:, daterange:, and others into your queries Use Google filtering tools, including Search Within Results, Similar Pages, and SafeSearch, among others Explore the breadth of Google through auxiliary search services like Google News, Google Books, Google Blog Search, and Google Scholar Acquire advanced Google skills that result in more effective search engine optimization (SEO)

Google Power Search

This open access book covers all facets of entity-oriented search—where "search" can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity

ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.

Entity-Oriented Search

What does the world want? According to John Battelle, a company that answers that question—in all its shades of meaning—can unlock the most intractable riddles of business and arguably of human culture itself. And for the past few years, that's exactly what Google has been doing. But The Search offers much more than the inside story of Google's triumph. It's a big-picture book about the past, present, and future of search technology and the enormous impact it's starting to have on marketing, media, pop culture, dating, job hunting, international law, civil liberties, and just about every other sphere of human interest.

Now in a new format, and better value than ever before, these classic searches are sure to keep children entertained for hours on end. Each beautifully illustrated double-page features a brain-teasing picture puzzle. As well as providing hours of puzzle-solving fun, each book is packed with fascinating facts presented in short, easy-to-read captions.

The Great Animal Search

Search History oscillates between a wild cyberdog chase and lunch-date monologues as Eugene Lim deconstructs grieving and storytelling with uncanny juxtapositions and subversive satire. Frank Exit is dead—or is he? While eavesdropping on two women discussing a dog-sitting gig over lunch, a bereft friend comes to a shocking realization: Frank has been reincarnated as a dog! This epiphany launches a series of adventures—interlaced with digressions about AI-generated fiction, virtual reality, Asian American identity in the arts, and lost parents—as an unlikely cast of accomplices and enemies pursues the mysterious canine. In elliptical, propulsive prose, Search History plumbs the depths of personal and collective consciousness, questioning what we consume, how we grieve, and the stories we tell ourselves.

Today, Web search is treated as a solitary experience. Web browsers and search engines are typically designed to support a single user, working alone. However, collaboration on information-seeking tasks is actually commonplace. Students work together to complete homework assignments, friends seek information about joint entertainment opportunities, family members jointly plan vacation travel, and colleagues jointly conduct research for their projects. As improved networking technologies and the rise of social media simplify the process of remote collaboration, and large, novel display form-factors simplify the process of co-located group work, researchers have begun to explore ways to facilitate collaboration on search tasks. This lecture investigates the who, what, where, when and why of collaborative search, and gives insight in how emerging solutions can address collaborators' needs. Table of Contents: Introduction / Who? / What? / Where? / When? / Why? / Conclusion: How?

With reference to China, this book examines the course of international patent rights harmonisation; its characteristics as well as impediments. It evaluates the case of China's patent law development over the course of the last three decades by drawing on the most up-to-date Chinese language sources. In the process, the volume focuses on China's patent legislation, its achievements and weaknesses, as well as the intrinsic limitations, especially as far as enforcement is concerned. The author pays close attention to the unique societal background in China, a country that did not provide constitutional recognition to private property rights until 2004 and where a property law entered into force as late as 2013, 30 years after the first promulgation of the patent law. Global trade policy makers, IP professionals and businesses will benefit from the insights presented by the chapters as they will help them to appreciate the achievements and the controversies pursuant to China's efforts in patent protection. While serving as a useful case study for countries seeking to leverage patent protection as a driver for economic development, the book will equally facilitate Chinese legislature to reflect on its patent legislation development, specifically on legislative policy choices. An additional analytical strength of the volume is that it compares the Chinese patent legislation with the American Invents Act and the European Patent Convention. It discovers the differences between the three patent legislations by using the minimum patent protection standards set down by the TRIPS

Agreement as the benchmark. The results of the comparisons suggest that China has successfully harmonised its patent legislation with the global patent protection system, and often opts for higher patent protection standards. The book also considers whether China could learn lessons from Japan and India in their respective patent legislation and policy choices. With China undertaking a fourth patent law amendment, the provisions contained in the second draft of the Patent Law 2015, which was published in December 2015, are included in the analysis.

Forming connections between human performance and design, this new edition of Engineering Psychology and Human Performance examines human–machine interaction. The book is organized directly from a psychological perspective of human information processing, and chapters correspond to the flow of information as it is processed by a human being—from the senses, through the brain, to action—rather than from the perspective of system components or engineering design concepts. Upon completing this book, readers will be able to identify how human ability contributes to the design of technology; understand the connections within human information processing and human performance; challenge the way they think about technology's influence on human performance; and show how theoretical advances have been, or might be, applied to improving human–machine interactions. This new edition includes the following key features: A new chapter on research methods Sections on interruption management and distracted driving as cogent examples of applications of engineering psychology theory to societal problems A greatly increased number of references to pandemics, technostress, and misinformation New applications Amplified emphasis on readability and commonsense examples Updated and new references throughout the text This book is ideal for psychology and engineering students, as well as practitioners in engineering psychology, human performance, and human factors. The text is also supplemented by online resources for students and instructors.

The book Visser's Annotated European Patent Convention is a commentary on the European Patent Convention and a bestseller in European patent law. Each year a new, updated edition of the book is published and available in paperback form. The 2019 edition of this preeminent work – the only regularly updated authoritative article-by-article commentary in English on the European Patent Convention (EPC), its implementing regulations, and associated case law – provides the complete text of the 2000 Convention annotated with commentary and expert guidance on the interpretation of each paragraph. Since its first edition in 1994 it has provided the European patent community with the necessary insights to practice successfully before the European Patent Office. The EPO recommends the Visser's Annotated European Patent Convention as the first book in its list of non-EPO/WIPO literature to be used for the preparation of the European qualifying examination. In addition to a thorough updating of developments, new material in this edition includes the following: New Rules of Procedure of the Boards of Appeal; New EPO Guidelines that enter into force on 01.11.2019; The references to Guidelines 2018 are kept for the eqe 2020 candidates.
